HOW TO CHOOSE THE Ionizer Filter That's Right For Your Unit The Vesta H2 offers on-board dual filtration capability - and there are two separate filters that need to be purchased for the Vesta H2. Either the [H2 Series Replacement Fluoride Shield](#) or the [H2 Series Replacement Primary Filter](#) go into position #1 (right side filter housing), while either the [H2 Series Replacement UltraWater Filter](#) or the [H2 Series Replacement Hollow Fiber UF Filter](#) goes into position #2 (left side filter housing) of your Athena H2 water ionizer. To figure out which filter combination is best, see the section below regarding [water supply types](#).

Here are the filter position #1 (right side) choices for your AlkaViva Vesta H2

BUY THIS FILTER [H2 Series Replacement Primary Filter \(Prefilter\)](#)

Model #AV-H2PRE

Five stages of protection highlighted by spun fiber technology and the highest quality carbon. **Goes on the RIGHT side of your Vesta H2.**

Price: \$79.95

BUY THIS FILTER [H2 Series Replacement Fluoride Shield](#)

Model #AV-H2FL

The Fluoride Shield employs the latest cutting edge technology and reduces fluoride to very low levels in laboratory tests. **Goes on the RIGHT side of your Vesta H2.**

Price: \$99.99

Here are the filter position #2 (left side) choices for your AlkaViva Vesta H2

BUY THIS FILTER [H2 Series Replacement UltraWater Filter](#)

Model #AV-H2UW

Removes up to 99.9% of virtually all contaminants, including chloramine, pharma, heavy metals and the toughest to remove contaminants like chromium Vi and arsenic. **Goes on the LEFT side of your Athena H2, Vesta H2 and Melody II series water ionizers.**

Price: \$119.95

BUY THIS FILTER **H2 Series Replacement Hollow Fiber UF Filter**

Model #AV-H2UF

Best for untreated well-water. Eight stages of protection highlighted by CaSO₃ to reduce heavy metals and different forms of chlorine, .01micron UF hollow fiber technology, and two stages of the highest quality carbon. **Goes on the LEFT side of your Athena H2, Vesta H2 and Melody II water ionizers.**

Price: \$109.95

You can also choose your filters by water supply type and contaminant levels:

The first thing you need to know when choosing the correct filters is to determine whether your water is city/municipally supplied, or whether you have "well water" (from your own private well). City water is almost always treated with chlorine/chloramines and other chemicals, while very few people add these types of treatment chemicals to their own water well. Because of that, there is a higher potential for live bacteria and pathogens to be in the tap water. That's when you would get the H2 Series Hollow Fiber UF Filter.

Let's break down the choices by looking at each of the water situations and the filters that you should get for that situation.

Well Water - Untreated: [H2 Series Primary Filter](#) & [H2 Series Hollow Fiber UF Filter](#)

Well Water - Treated with chlorine: [H2 Series Primary Filter](#) & [H2 Series UltraWater Filter](#)

Municipal Water - Low treatment levels: [H2 Series Primary Filter](#) & [H2 Series UltraWater Filter](#)

Municipal Water - Higher treatment levels: [H2 Series Hollow Fiber UF Filter](#) & [H2 Series UltraWater Filter](#)
